

Activity 1

#3 Takeaways from 366Pi technologies

1. 366Pi uses technology for smart solutions

The company works on digital tools and innovative ideas to solve real-world business problems.

2. The company supports sustainability

366Pi focuses on environment-friendly practices and promotes climate-positive initiatives along with technology.

3. 366Pi believes in learning and growth

The company encourages teamwork, innovation, and continuous learning for employees and interns.

3 Takeaways from FlowCard

1. Digital Business Card Platform

FloCard allows users to create and share digital business cards using QR codes, links, and OTPs.

2. Supports Sustainability

FloCard promotes eco-friendly networking by reducing paper business cards and supporting climate action goals.

3. Built for Different Users

The platform supports individuals, businesses, communities, and tree planters through a connected ecosystem.

Activity 2

1. FloCard created.

2. Added relevant personal and professional details.
3. Exchanged cards with at least 3 team members

I, Navya Mishra, an Intern at 366Pi Technologies, am sharing this as part of my Warmup Tasks onboarding activity where I am documenting and sharing my learnings.

During this onboarding activity, I explored the company platforms, understood the FloCard ecosystem, and created my own digital FloCard profile. This task helped me learn how technology, sustainability, and digital networking can work together to create impactful solutions.

Understanding the FloCard Ecosystem Flow

During my onboarding journey, I explored how FloCard is building a connected digital ecosystem that combines networking, collaboration, sustainability, and climate action into one platform. What makes FloCard unique is that it is not limited to digital business cards—it connects individuals, communities, and environmental contributors through technology-driven solutions.

1. Flow for Individuals

The journey for an individual on FloCard starts with creating a digital identity through a FloCard profile. Users can add their personal and professional information, share contact details instantly, and connect with others seamlessly.

Key Features for Individuals

- Create a digital professional identity
- Share contact details instantly through FloCard
- Build and manage professional connections
- Participate in sustainability-focused activities
- Collaborate through integrated digital tools
- Access networking and communication features

Unlike traditional visiting cards, FloCard creates a dynamic and interactive networking experience. Once connected, individuals become part of a larger sustainability-driven ecosystem. FloCard encourages every user to become a “planter” by default, meaning users are connected to climate-positive activities alongside professional networking.

Users can:

- Tag and track trees
- Join environmental initiatives
- Collaborate with communities
- Build meaningful professional relationships

In simple terms, FloCard transforms networking into a purpose-driven digital experience where personal growth and environmental responsibility go together.

2. Flow for Communities

FloCard for Community is designed to create collaboration-focused ecosystems where people with common goals can work together effectively. Communities can use FloCard to organize workshops, events, climate initiatives, innovation programs, and learning activities while maintaining continuous interaction among members.

Community Workflow

1. Organizations onboard members onto the platform
2. Members create and connect their profiles
3. Communities manage communication and collaboration
4. Teams organize events and sustainability projects
5. Members share resources and track progress

Key Benefits for Communities

- Better collaboration among members
- Easy event and workshop management
- Resource and knowledge sharing
- Improved communication channels
- Transparency in projects and initiatives
- Climate-focused community engagement

A major strength of FloCard for Community is its focus on climate action and sustainability. Communities working on environmental or social impact projects can use the platform to simplify collaboration, improve transparency, and attract climate-focused opportunities.

This creates a digital environment where communities become more organized, connected, and purpose-driven.

3. Flow for Tree Planters

The Planters ecosystem is one of the most impactful parts of FloCard. It focuses on empowering individuals and groups to participate in environmental restoration and climate-positive activities through technology.

Planter Ecosystem Flow

1. User registers on the Planters App
2. Trees or plantations are tagged digitally
3. Plantation data gets stored securely
4. Growth and impact are monitored over time
5. Contributions support climate and sustainability goals

Features for Tree Planters

- Tree and plantation tagging
- GPS/location-based tracking
- Plantation verification system
- Secure and transparent records
- Growth monitoring and reporting
- Support for carbon and sustainability initiatives

The platform uses blockchain-enabled systems to make plantation records secure, immutable, and trustworthy. Planters can monitor tree growth, track environmental contributions, and participate in future sustainability opportunities.

Why This Matters

- Encourages climate-positive actions
- Makes environmental impact measurable
- Builds accountability and transparency
- Connects technology with sustainability
- Creates long-term ecological value

FloCard promotes the idea that "everyone is a planter," encouraging users to contribute toward climate goals while becoming part of a larger movement for sustainability.
