

Week 1

Day 3

1 Explore KidCare

Access the staging environment

user flow for a parent/guardian

- Parent signs up or log in
- Adds child details (name, age, medical info, etc.)
- Books appointments or connects with care providers
- Tracks child activities, health, or reports
- Receives notifications/reminders
- Communicates with caregivers or admins

core features and value proposition

Main Features

- Child profile management
- Parent/guardian dashboard
- Appointment or activity tracking
- Notifications & reminders
- Communication system
- Health and care record management

Value Proposition

KidCare helps parents and caregivers manage child-related activities digitally in one place. It improves communication, organization, and tracking while saving time for both families and care providers.

2. Understand Fennex

Visited fennex.net

summary of what Fennex does understand how and on what projects 366pi Technologies work with Fennex

Fennex is a digital technology company that mainly works in the energy, oil & gas, and offshore wind industries. The company develops AI-powered and cloud-based platforms that help organizations improve safety, risk management, compliance, and operational efficiency. Their solutions convert manual and complex workflows into automated digital systems with real-time monitoring and analytics.

products developed by Fennex

FennexSafe™

A platform that transforms traditional, manual safety and compliance processes into efficient, automated workflows.

BBSS™

A data-driven, AI-powered safety observation and reporting solution.

Risk Management Tool

A platform that digitises, automates and enhances risk assessment, approval workflows and decision-making.

AI Predictive Safety

AI-powered predictive safety that detects signals early and drives targeted intervention.

A data-driven digital safety and assurance platform, delivering real-time visibility and proactive risk management for offshore wind projects.

How and on what projects 366pi Technologies work with Fennex ?

Mainly as a technology and innovation partner for digital safety and enterprise solutions in the oil & gas and energy sector.

How 366Pi works with Fennex

- 366Pi provides:
 - Digital workplace solutions
 - Dashboard and reporting systems
 - Automation and data integration support
- Fennex provides:
 - Safety and compliance platforms
 - Risk management systems
 - Industry expertise for offshore and energy operations

Projects on which 366pi Tech worked with Fennex

1. AI-Powered Safety Systems

Fennex's BBSS is an AI-powered safety observation platform used in offshore oil & gas projects. 366Pi supports such systems with AI engineering, dashboards, analytics, and digital integration.

2. Safety & Compliance Platforms

They collaborate on platforms like:

- FennexSafe
- Risk Management Tools
- Audit & Inspection systems

These help companies digitize safety checks, compliance workflows, and operational monitoring.

3. Digital Workplace & Enterprise Solutions

366Pi contributes technologies such as:

- SharePoint
- Microsoft 365
- Power BI
- Azure Cloud

These tools help Fennex customers manage information, collaboration, and reporting more efficiently.

4. Oil & Gas Industry Intelligence

366Pi is actively building AI-based reporting and operational intelligence systems for energy and EPC projects. These systems help leadership monitor operations, HSE (Health, Safety & Environment), and project performance in real time.

3. Basics of SharePoint

Microsoft SharePoint is a web-based collaboration and document management platform created by Microsoft. It is a part of Microsoft 365 ecosystem. It help organisation to store,manage,organise and share information securely.

WHY SHAREPOINT IS IMPORTANT

Centralizes company data and documents.

Improves collaboration among teams and departments.

Reduces dependency on emails and local file storage.

Provides secure access control and compliance management.

Supports digital transformation initiatives in enterprises.

3 use case where enterprise can help SharePoint workflow

1. Document Management

Enterprises use Microsoft SharePoint to store, organize, and manage company documents in one secure location.

Example

- Contracts
- Project files
- Training documents

Benefits

- Easy file sharing
- Version control
- Secure access permissions
- Faster document search

3. Team Collaboration

Teams use SharePoint to collaborate on projects and work together in real time.

Example

- Multiple employees editing the same file
- Sharing meeting notes
- Managing project resources

Benefits

- Improved teamwork
- Real-time collaboration
- Reduced email dependency

3. Employee Onboarding Workflow

Enterprises use SharePoint to manage onboarding tasks for new employees.

How it works:

- HR creates onboarding request
- Tasks are assigned automatically to IT, HR, and Admin teams
- Progress is tracked in one system

Benefits:

- Smooth onboarding process
- Reduced manual coordination
- Faster employee setup and access management

4. Browse & Document Use Cases

1 live use case of following product

What problem it solves ?

Who uses it ?

What's the core value delivered?

- FloCard
- Tree Planters
- KidCare

1. FloCard

Live Use Case

A business professional uses FloCard during networking events to instantly share digital business cards and connect with clients while also supporting sustainability goals.

Problem It Solves

FloCard solves the problem of paper business cards getting lost, outdated, or creating unnecessary waste. It also helps businesses build eco-friendly digital networking systems.

Who Uses It

Professionals, startups, corporate teams, communities, and sustainability-focused organizations use FloCard for networking and collaboration.

Core Value Delivered

It delivers instant digital networking, professional branding, and supports sustainability through paperless communication and integrated eco-solutions.

2. Tree Planters

Live Use Case

An NGO or company running a plantation drive uses the Planters App to tag planted trees, track locations, and monitor restoration projects with transparency.

Problem It Solves

The Planters App solves the challenge of manually tracking plantation activities and maintaining transparency in sustainability projects. It helps organizations monitor every planted tree digitally.

Who Uses It

Environmental groups, NGOs, companies with net-zero goals, and individual climate advocates use the platform.

Core Value Delivered

It delivers traceable plantation management, supports sustainability initiatives, and helps organizations work toward climate action and restoration goals.

3. KidCare**Live Use Case**

Parents use KidCare to book doctor appointments, track vaccinations, and access expert child healthcare guidance from one app.

Problem It Solves

KidCare solves communication and healthcare management challenges for parents by combining appointment booking, vaccination tracking, and expert support in a single platform.

Who Uses It

Parents, pediatricians, healthcare providers, and childcare professionals use KidCare for child health management.

Core Value Delivered

It delivers convenient child healthcare management, better parent-doctor communication, and easy access to health tracking and expert insights.
